

Celebrate World Water Day – March 22!

FOCUS ON WASTEWATER ON WORLD WATER DAY

HELPS PROTECT THE ENVIRONMENT

PROMOTES ECONOMIC DEVELOPMENT

FOSTERS JOB CREATION

▲ The *International Private Sewage Disposal Code*® (IPSDC) applies best practices and the latest technologies to safeguard communities, individuals, and businesses using onsite wastewater solutions.

The complete set of I-codes address the entire life cycle of water in a building or house — from when it enters the structure to when it exits the structure.

“World Water Day reminds us all of the intrinsic value of clean water and why it is so important to every human being – and our nation’s future. Modernized, well-functioning water and wastewater systems are essential to our individual health and quality of life. And, in a broader sense, managing water supply, treatment and wastewater capacity will also affect our nation’s future economic strength.”

— ICC Chief Executive Officer Dominic Sims, CBO
