Code Council Presents Free 2009 I-Code Overview Webinars

The International Code Council is launching a series of free overview webinars on the 2009 I-Codes, especially valuable to many in the industry who face tight budgets that restrict or eliminate training and travel expenditures.

Each webinar runs almost one hour and provides an overview of the code. The webinars cover the most significant changes between the 2009 and 2006 editions of the codes, and provides viewers with a technical overview of the new code. The 2009 International Building, Residential, Fire, Plumbing, Mechanical and Fuel Gas Codes are included in the no-cost webinars.

“Building departments, architects, engineers, designers, contractors and just about everyone in the construction industry is hurting in this economy,” said Code Council CEO Rick Weiland. “Despite the economy, the public benefits of building safety should not and can not suffer. That’s why we are offering these webinars for code users at no cost.”

To register and learn more about the free 2009 I-Code webinars, visit www.iccsafe.org/09free. The webinars are available online 24/7.

The International Code Council, a membership association dedicated to building safety and fire prevention, develops the codes used to construct residential and commercial buildings, including homes and schools. Most U.S. cities, counties and states choose the International Codes, building safety codes developed by the International Code Council.
