Subject: ICC vote

Mr. Sims --

I am aware that several organizations are challenging the results and the process of the 2021 code development process.

I wanted to voice my support of the ICC process as it stands in the 2021 code development voting.

A lot of effort was made by municipalities in this state to follow the ICC guidelines to become members, register to be a governmental voting member, and vote using the cdp-access tool.

Many local governments do not have the means to send all eligible voting members to the meetings in person so having the online cdp-access is of great benefit to have a larger percentage of eligible voting members participate in the code development process.

Thank you to you and your staff for maintaining the integrity of this system.
