Subject: Support for keeping the IECC within the current ICC Code Development Process

I support the current ICC code development consensus process for the IECC. Based on my exposure to the ASHRAE standard development process, there are very few code officials involved in the standard making process. I believe there is more opportunity to increase the level of governmental participation through the ICC code development process. The standard making process is long and arduous, particularly with continuous improvements. There is no beginning nor end. The ICC code development process allows the IECC to be developed in correlation with the other I-codes and not relegated to a secondary level of concern.

At the very least, the IECC administrative chapter should always be subjected to the ICC development process.

Sincerely,

Anthony Floyd, FAIA, CSP
