IAEI and the International Code Council collaborate to update 2023 edition of NEC Analysis of Changes publication

The publication will offer expert insight into code revisions regarding electrical and life safety topics

Washington, D.C. – The International Association of Electrical Inspectors (IAEI) and the International Code Council are collaborating on the upcoming industry-leading *Analysis of Changes – National Electrical Code (NEC) 2023* publication. This essential resource makes key changes to the 2023 version of [NFPA 70, National Electrical Code \(NEC\)®](#) easy to quickly identify, understand and apply effectively. The *Analysis of Changes* is the premier resource for electrical inspectors, contractors, electricians, manufacturers, and other professionals involved with the safe application, compliance, and enforcement of electrical systems.

“The Code Council is proud to support the publication of the *Analysis of Changes, NEC 2023* by IAEI,” said Mark Johnson, Executive Vice President and Director of Business Development at the Code Council. “This book represents the best tool for industry professionals, especially electrical inspectors, transitioning to the latest version of NFPA 70 which will be adopted by reference in the ICC Family of Codes and thereby helps ensure the safety and resiliency of buildings in our communities.”

Analysis of Changes – NEC 2023 reviews and analyzes key changes to code language in the 2023 NFPA 70, NEC, by highlighting and explaining revisions to residential, commercial, and industrial design and installation requirements. Authored by IAEI representatives who sit on all the 18 NEC® code-making panels, this resource helps professionals learn the significant changes on topics such as conductors, grounding, surge protection and outdoor emergency disconnects for dwelling units, and this edition of the code includes ten new articles. The 2023 analysis now concisely answers three critical questions: what the change is, why was it made, and how the change impacts the electrical industry.

The publication features informational code text along with helpful images and diagrams, insights into the code sections, and the reasoning behind code changes to help users grasp critical issues.

“This unique co-branding opportunity allows IAEI to reach an audience beyond its universe of members and into the much broader universe of Code Council members and more,” said IAEI CEO, Rudy Garza. “IAEI is the originator of the NEC code change book and has been producing

the *Analysis of Changes* since 1978. It is the premier and most respected NEC changes publication in the world.”

Through the ongoing [collaboration between IAEI and the Code Council](#), advanced orders will soon be accepted for this latest volume in the *Analysis of Changes* series and go-to resource for the industry. It will be available later this summer in both print and digital formats on both [the Code Council's](#) and [IAEI's](#) respective online stores.

###

About the International Code Council

The [International Code Council](#) is the leading global source of model codes and standards and building safety solutions. Code Council codes, standards and solutions are used to ensure safe, affordable and sustainable communities and buildings worldwide.

About IAEI

The [International Association of Electrical Inspectors \(IAEI\)](#) is a 501(c)(6) not-for-profit professional trade association committed to public safety from electrical hazards by providing expert, unbiased leadership in electrical code and standards development and premier education and certification for electrical professionals. IAEI was established in, and has been in continuous operation since, 1928. As a leader in the electrical training space, IAEI's mission is to educate and equip electrical professionals while unifying the industry to promote electrical safety.
