What Is Tramadol?

Tramadol is a prescription opioid analgesic used to relieve **moderate to moderately severe pain**. It works by **binding to opioid receptors in the brain and spinal cord** and altering the way the body perceives pain.

Primary Uses of Tramadol:

- Post-surgical pain management
- Injury or trauma-related pain
- Chronic moderate pain under medical supervision
- Acute pain episodes requiring effective analgesics

Tramadol helps patients **regain comfort, mobility, and daily functionality**, making it essential for effective pain management.
