© 2024 Shums Coda Associates, Inc.
OUTLINE OF CLASS

- IBC Section 307 in detail
- IBC Section 414 and 415
- IFC Chapter 50, and others that apply
- Questions to help evaluate the material
- SDS overview

WHERE ARE HIGH HAZARDS?

- Places you might think of:
  - Fuel Refineries
  - Cabinet shops
  - Grain silos
  - Fertilizer plants
  - Fireworks
  - Computer Chip processors
  - Distilleries

- Places you might NOT think of:
  - Swimming Pool equipment rooms
  - Cabella’s/Bass Pro
  - Home Depot
  - Laboratories
  - Performance Stages
  - Schools
  - Bulk Storage Liquor Stores
HELPING THE HAZARDOUS MATERIALS CUSTOMER

- Work hand in hand with the Fire Dept. if possible
- Make sure both IFC and IBC code requirements are met
- Try to use common sense approach to each situation to prevent under/over enforcement

IFC APPENDIX E103.2 EVALUATION QUESTIONS TO HELP YOU

- What is the material?
- Correct identification is important; exact spelling is vital.
- Checking labels and SDS and asking responsible persons should be among the highest priorities.
2. What are the concentration and strength?
   - Some things are stronger at a high concentration
   - Hydrogen Peroxide is hair bleach @ 8%
   - Hydrogen Peroxide can explode in heat at over 90% and is an unstable reactive

3. What is the physical form of the material? Liquids, gases and finely divided solids have differing requirements for spill and leak control and containment.
E103.2 EVALUATION QUESTIONS

- How much material is present? Consider in relation to permit amounts, maximum allowable quantity per control area (from Group H occupancy requirements), amounts which require detached storage and overall magnitude of the hazard.
- Is it stored or in use?
- Is it closed or open use?

5. What other materials (including furniture, equipment and building components) are close enough to interact with the material?
E103.2 EVALUATION QUESTIONS

6. What are the likely reactions?
   - Explosions?
   - People inhaling chemicals?
   - Combustible dust in the area?

E103.2 EVALUATION QUESTIONS

7. What is the activity involving the material?
   - Is it out in the open?
   - Is it enclosed in piping?
   - Is it becoming air laden vapors?
E103.2 EVALUATION QUESTIONS

8. How does the activity impact the hazardous characteristics of the material? Consider vapors released or hazards otherwise exposed.

9. What must the material be protected from? Consider other materials, temperature, shock, pressure, etc.
E103.2 EVALUATION QUESTIONS

10. What effects of the material must people and the environment be protected from?

11. How can protection be accomplished?

Consider:

11.1. Proper containers and equipment.
11.2. Separation by distance or construction.
11.3. Enclosure in cabinets or rooms.
11.4. Spill control, drainage and containment.
11.5. Control systems- ventilation, special electrical, detection and alarm, extinguishment, explosion venting, limit controls, exhaust scrubbers and excess flow control.
11.6. Administrative (operational) controls-signs, ignition source control, security, personnel training, established procedures, storage plans and emergency plans.
307 HIGH-HAZARD GROUP H

Includes, among others, the use of a building or structure, or a portion thereof, that involves the manufacturing, processing, generation or storage of materials that constitute a physical or health hazard in quantities in excess of those allowed in compliant control areas.

WHAT ISN’T A GROUP H OCCUPANCY

Buildings and structures occupied for the application of flammable finishes, provided that such buildings or areas conform to the requirements of Section 416 and the International Fire Code.
WHAT ISN’T A GROUP H OCCUPANCY

- Wholesale and retail sales and storage of flammable and combustible liquids in mercantile occupancies conforming to the International Fire Code.

WHAT ISN’T A GROUP H OCCUPANCY

- Closed piping system containing flammable or combustible liquids or gases utilized for the operation of machinery or equipment.
WHAT ISN’T A GROUP H OCCUPANCY

- Cleaning establishments that utilize combustible liquid solvents having a flash point of 140°F or higher in closed systems employing equipment listed by an approved testing agency, provided that this occupancy is separated from all other areas of the building by 1-hour fire barriers constructed in accordance with Section 707 or 1-hour horizontal assemblies constructed in accordance with Section 712, or both.

WHAT ISN’T A GROUP H OCCUPANCY

- Cleaning establishments that utilize a liquid solvent having a flash point at or above 200°F.
WHAT ISN’T A GROUP H OCCUPANCY

- Liquor stores and distributors without bulk storage.

WHAT ISN’T A GROUP H OCCUPANCY

- Refrigeration systems.
WHAT ISN’T A GROUP H OCCUPANCY

- The storage or utilization of materials for agricultural purposes on the premises.

- Stationary storage battery systems installed in accordance with the International Fire Code.
WHAT ISN’T A GROUP H OCCUPANCY

- Corrosive personal or household products in their original packaging used in retail display.

WHAT ISN’T A GROUP H OCCUPANCY

- Commonly used corrosive building materials.
WHAT ISN’T A GROUP H OCCUPANCY

- Buildings and structures occupied for aerosol product storage, aerosol cooking spray products or plastic aerosol 3 products shall be classified as Group S-1, provided that such buildings conform to the requirements of the International Fire Code.

- Display and storage of nonflammable solid and nonflammable or noncombustible liquid hazardous materials in quantities not exceeding the maximum allowable quantity per control area in Group M or S occupancies complying with Section 414.2.5.
What Isn’t a Group H Occupancy

- The storage of black powder, smokeless propellant and small arms primers in Groups M and R-3 and special industrial explosive devices in Groups B, F, M and S, provided such storage conforms to the quantity limits and requirements prescribed in the International Fire Code.

Stationary fuel cell power systems installed in accordance with the International Fire Code.
WHAT ISN’T A GROUP H OCCUPANCY

- Capacitor energy storage systems in accordance with the International Fire Code.

WHAT ISN’T A GROUP H OCCUPANCY

- Group B higher education laboratory occupancies complying with Section 428 and Chapter 38 of the International Fire Code.
WHAT ISN’T A GROUP H OCCUPANCY

Distilling or brewing of beverages conforming to the requirements of the International Fire Code.

The storage of beer, distilled spirits and wines in barrels and casks conforming to the requirements of the International Fire Code.
307 HIGH-HAZARD GROUP H

Physical Hazards Table 307.1(1) defined in IFC as:
- 1. Explosives and blasting agents.
- 2. Combustible liquids.
- 3. Flammable solids, liquids and gases.
- 4. Organic peroxide solids or liquids.
- 5. Oxidizer, solids or liquids.
- 6. Oxidizing gases.
- 7. Pyrophoric solids, liquids or gases.
- 8. Unstable (reactive) solids, liquids or gases.
- 9. Water-reactive materials solids or liquids.
- 10. Cryogenic fluids.

Health Hazards Table 301.1(2) defined in IFC as:
- 1. Highly toxic and toxic materials.
- A material with a health hazard classification can also pose a physical hazard. (Anhydrous Ammonia—See HMEx)

© 2024 Shums Coda Associates, Inc.
**PARACELSUS: 14TH CENTURY ALCHEMIST**

- Considered to be the father of toxicology
- “All things are poison and nothing is without poison; only the dose permits something not to be poisonous.”
- Shows why reducing amounts or concentrations is important

---

**USE TABLE 307 FOOTNOTES AND PREVENT AN “H” OCCUPANCY LABEL**

- Safety & Protection occur when we:
  - Reduce amounts
  - Separate materials into protected areas (control areas)
  - Put it into approved cabinets/day boxes
  - Enclose it instead of making it open to the air
  - Sprinkle the building
- This is more of the compartmentation concept as already exists in the code
TABLE 307.1(1) FOOTNOTES

a. For use of control area, see Section 414.2.
b. The aggregate quantity in use and storage shall not exceed the quantity listed for storage.
c. The quantities of alcoholic beverages in retail and wholesale sales occupancies shall not be limited provided the liquids are packaged in individual containers not exceeding 1.5 gallons. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs or consumer products, and cosmetics containing not more than 50 percent by volume of water-miscible liquids with the remainder of the solutions not being flammable, shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.3 gallons.
d. Maximum allowable quantities shall be increased 100 percent in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. Where Note e also applies, the increase for both notes shall be applied accumulatively.
e. Maximum allowable quantities shall be increased 100 percent when stored in approved storage cabinets, day boxes, gas cabinets, gas rooms or exhausted enclosures or in listed safety cans in accordance with Section 5003.9.10 of the International Fire Code. Where Note f also applies, the increase for both notes shall be applied accumulatively.
f. Quantities shall not be limited in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.
g. Allowed only in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.
h. Containing not more than the maximum allowable quantity per control area of Class IA, IB or IC flammable liquids.
i. The maximum allowable quantity shall not apply to fuel oil storage complying with Section 605.3.2 of the International Fire Code.
j. Quantities in parentheses indicate quantity units in parentheses at the head of each column.
k. A maximum quantity of 220 pounds of solid or 22 gallons of liquid Class 3 oxidizers is allowed when such materials are necessary for maintenance purposes, operation or sanitation of equipment when the storage containers and the manner of storage are approved.
l. Not weight of the pyrotechnic composition of the fireworks, Where the net weight of the pyrotechnic composition of the fireworks is not known, 25 percent of the gross weight of the fireworks, excluding packaging, shall be used.
m. For gallons of liquids, divide the amount in pounds by 10 in accordance with Section 5003.1.2 of the International Fire Code.
n. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with Section 414.2.5, see Tables 414.2.5(b) and 414.2.5(c).
o. Densely packed baled cotton that complies with the packing requirements of ISO 8115 shall not be included in this material class.
p. The following shall not be included in determining the maximum allowable quantities:
1. Liquid or gaseous fuel in fuel tanks on vehicles.
2. Liquid or gaseous fuel in fuel tanks on motorized equipment operated in accordance with the International Fuel Gas Code.
3. Gaseous fuels in piping systems and fixed appliances regulated by the International Mechanical Code.
4. Liquid fuels in piping systems and fixed appliances regulated by the International Mechanical Code.
5. Alcohol-based hand rubs classified as Class 1 or II liquids in dispensers that are installed in accordance with Sections 5705.5 and 5705.5.1 of the International Fire Code. The location of the alcohol-based hand rub (ABHR) dispensers shall be provided in the construction documents.
q. Where manufactured, generated or used in such a manner that the concentration and conditions create a fire or explosion hazard based on information prepared in accordance with Section 414.1.3.
CONTROL AREAS IBC 414.2

- The control area can be the entire building, the entire floor or the entire room or rooms.
- Separated by fire barriers or horizontal assemblies
- Floors & supporting construction must be 2 hr rated
  - Exceptions for 1 hr in Type IIA, IIIA, VA sprinkled buildings of 3 stories or less
FOOTNOTE ‘D’
FIRE SPRINKLERS
- Maximum allowable quantities shall be increased 100 percent in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.
- Where Note e also applies, the increase for both notes shall be applied accumulatively.

FOOTNOTE ‘E’
APPROVED STORAGE
- Maximum allowable quantities shall be increased 100 percent when stored in approved storage cabinets, day boxes, gas cabinets, gas rooms or exhausted enclosures or in listed safety cans in accordance with Section 5003.9.10 of the International Fire Code.
- Where Note d also applies, the increase for both notes shall be applied accumulatively.
FOOTNOTE “E”; WHAT MAKES AN APPROVED CABINET OR SAFETY CAN?

- Cabinets are allowed for liquids, solids, gas bottles
- Liquids in cabinets in IFC 5704.3.2 & Solids in cabinets in IFC 5003.8.7
- Gas cylinder in cabinets in IFC 5003.8.6

FOOTNOTE “E”; WHAT IS A SAFETY CAN?

- Safety Cans: IFC 5003.9.10
- Must be metal and meet UL 30 to increase amounts
- May be non-metallic and meet UL 1313 if not increasing amounts
FOOTNOTE “E”; WHAT IS A DAY BOX?

A portable magazine designed to hold explosive materials constructed in accordance with the requirements for a Type 3 magazine as defined and classified in Chapter 56 of the IFC.
307.2
HAZARDOUS MATERIALS

Hazardous materials in any quantity shall conform to the requirements of this code, including Section 414, and the International Fire Code.

IBC 307.3 H1

Buildings and structures containing materials that pose a detonation hazard shall be classified as Group H-1. Such materials shall include, but not be limited to, the following:

Type 2 Magazine housing 900 lbs of Division 1.1 mass detonation explosives with bullet resistant CMU wall around. Alt. methods and materials used since no panic hardware and no sprinklers allowed per BATFE which takes precedence over IFC/IBC.
Detonable pyrophoric materials (they ignite spontaneously below room temp, sometimes in water)

Explosives:
- Division 1.1
- Division 1.2
- Division 1.3
  - Exception: Materials that are used and maintained in a form where either confinement or configuration will not elevate the hazard from a mass fire to mass explosion hazard shall be allowed in H-2 occupancies.
- Division 1.4
  - Exception: Articles, including articles packaged for shipment, that are not regulated as an explosive under Bureau of Alcohol, Tobacco and Firearms regulations, or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles shall be allowed in H-3 occupancies.
- Continue H1 on next slide...

H1 CONTINUED

- Explosives continued;
  - Division 1.5
  - Division 1.6
- Organic peroxides, unclassified detonable
- Oxidizers, Class 4
- Unstable (reactive) materials, Class 3
detonable and Class 4
EXPLOSIVE DIVISIONS IFC 202

- Division 1.1. Explosives that have a mass explosion hazard. A mass explosion is one which affects almost the entire load instantaneously.
- Division 1.2. Explosives that have a projection hazard but not a mass explosion hazard.
- Division 1.3. Explosives that have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard.
- Division 1.4. Explosives that pose a minor explosion hazard. The explosive effects are largely confined to the package and no projection of fragments of appreciable size or range is to be expected. An external fire must not cause virtually instantaneous explosion of almost the entire contents of the package.
- Division 1.5. Very insensitive explosives. This division is comprised of substances that have a mass explosion hazard but which are so insensitive that there is very little probability of initiation or of transition from burning to detonation under normal conditions of transport.
- Division 1.6. Extremely insensitive articles which do not have a mass explosion hazard. This division is comprised of articles that contain only extremely insensitive detonating substances and which demonstrate a negligible probability of accidental initiation or propagation.

FIREWORKS IFC 202 DEF.

- FIREWORKS. Any composition or device for the purpose of producing a visible or an audible effect for entertainment purposes by combustion, deflagration or detonation that meets the definition of 1.4G fireworks or 1.3G fireworks as set forth herein.
FIREWORKS IFC 202 DEF.

- 1.3G (Formerly Class B, Special Fireworks). Large fireworks devices.
- 1.4G (Formerly known as Class C, Common Fireworks). Small fireworks devices.

DETONATION. An exothermic (process that releases energy in form of heat and light) reaction characterized by the presence of a shock wave in the material which establishes and maintains the reaction.

- The reaction zone progresses through the material at a rate greater than the velocity of sound.
- The principal heating mechanism is one of shock compression.
- Detonations have an explosive effect.
PEPCON DISASTER

- Pacific Engineering and Production Company of Nevada (PEPCON)
- Henderson, Nevada
- May 4, 1988
- Two fatalities, 372 injuries
- An estimated $100 million of damage

DETONATION
HIGH-HAZARD GROUP H-2

- Buildings and structures containing materials that pose a deflagration hazard or a hazard from accelerated burning shall be classified as Group H-2.
- Such materials shall include, but not be limited to, the following:
  - Class I, II or IIIA flammable or combustible liquids that are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 pounds per square inch gauge.
  - Combustible dusts
  - Cryogenic fluids, flammable
  - Flammable gases

H-2 CONTINUED

- Organic peroxides, Class I
- Oxidizers, Class 3, that are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 pounds per square inch gauge
- Pyrophoric liquids, solids and gases, nondetonable
- Unstable (reactive) materials, Class 3, nondetonable
- Water-reactive materials, Class 3
UNDERSTANDING KEY “H” TERMS

- Deflagration: rapid exothermic reaction, burns at less than the speed of sound
- Detonation: rapid exothermic reaction, burns at more than the speed of sound
- H1 detonates
- H2 deflagrates
- Exothermic: an extreme chemical reaction of oxidation releasing energy in the form of heat (exo=outside, thermic=heating)

DEFLAGRATION
UNDERSTANDING KEY “H” TERMS

- Cryogenic-
  - Very cold liquid/gas
    (-60° to -270°F)
- Flammable
  - A liquid having a closed cup flash point below 100°F
- Combustible
  - A liquid having a closed cup flash point at or above 100°F

HIGH HAZARD GROUP H-3

- Buildings and structures containing materials that readily support combustion (it burns) or that pose a physical hazard shall be classified as Group H-3.
- Such materials shall include, but not be limited to, the following:
HIGH HAZARD GROUP H-3

- Class I, II or IIIA flammable or combustible liquids that are used or stored in normally closed containers or systems pressurized at 15 pounds per square inch gauge (103.4 kPa) or less
- Combustible fibers, other than densely packed baled cotton, where manufactured, generated or used in such a manner that the concentration and conditions create a fire or explosion hazard based on information prepared in accordance with Section 414.1.3.
- Consumer fireworks, 1.4G (Class C, Common)
- Cryogenic fluids, oxidizing
- Flammable solids

COMBUSTIBLE FIBERS
SAMPLE HAZARD: MARIJUANA EXTRACTION

- The extraction process includes the act of extraction of the oils and fats by use of a solvent, desolventizing of the raw material, production of the miscella, distillation of the solvent from the miscella and solvent recovery.
- Is it an “H”?

SAMPLE HAZARD: MARIJUANA EXTRACTION

- Propane is a liquified flammable gas
Flammable Gas in excess of MAQ is a Group H-2.

Quantities permitted to be increased is building is provided with fire sprinklers.
307.6 HIGH-HAZARD GROUP H-4.

- Buildings and structures which containing materials that are health hazards shall be classified as Group H-4.
- Such materials shall include, but not be limited to, the following:
  - Corrosives
  - Highly toxic materials
  - Toxic materials
  - See definitions for when it is toxic or highly toxic

© 2024 Shums Coda Associates, Inc.

150 lb cyl. Chlorine gas

For SI: 1 cubic foot = 0.028 m³, 1 pound = 0.454 kg, 1 gallon = 3.785 L.

a. For use of control areas, see Section 414.2.
b. The aggregate quantity in use and storage shall not exceed the quantity listed for storage.
c. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs or consumer products, and cosmetics containing not more than 50 percent by volume of water-miscible liquids and with the remainder of the solution not being flammable, shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.5 gallons.
d. Maximum allowable quantities shall be increased 100 percent in buildings equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1. Where Note d also applies, the increase for both notes shall be applied cumulatively.
e. Maximum allowable quantities shall be increased 100 percent where stored in approved storage cabinets, gas cabinets or exhausted enclosures as specified in the International Fire Code. Where Note d also applies, the increase for both notes shall be applied cumulatively.
f. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with Section 414.2.5, see Tables 414.2.5(1) and 414.2.5(2).
g. Allowed only where stored in approved exhausted gas cabinets or exhausted enclosures as specified in the International Fire Code.
h. Quantities in parentheses indicate quantity units in parentheses at the head of each column.
i. For gallons of liquids, divide the amount in pounds by 10 as in accordance with Section 500.1.2 of the International Fire Code.
HIGH HAZARD GROUP H-4

Corrosive: DEF.
A chemical that causes visible destruction of, or irreversible alterations in, living tissue by chemical action at the point of contact.

307.7 HIGH-HAZARD GROUP H-5

Semiconductor fabrication facilities and comparable research and development areas in which hazardous production materials (HPM) are used and the aggregate quantity of materials is in excess of those listed in Tables 307.1(1) and 307.1(2) shall be classified as Group H-5. Such facilities and areas shall be designed and constructed in accordance with Section 415.8.
HAZARDOUS PRODUCTION MATERIAL (HPM). IFC 202

- A solid, liquid or gas associated with semiconductor manufacturing that has a degree-of-hazard rating in health, flammability or instability of Class 3 or 4 as ranked by NFPA 704 and which is used directly in research, laboratory or production processes which have, as their end product, materials that are not hazardous.

307.8 MULTIPLE HAZARDS

- Buildings and structures containing a material or materials representing hazards that are classified in one or more of Groups H-1, H-2, H-3 and H-4 shall conform to the code requirements for each of the occupancies so classified.

- Example: Anhydrous Ammonia
  - Liquefied Flammable gas; H-2 if over exempt amounts
  - Corrosive so also H-4

- Requirements of both occupancies must be followed
**IBC 414 HAZARDOUS MATERIALS**

- “The provisions of Sections 414.1 through 414.6 shall apply to buildings and structures occupied for the manufacturing, processing, dispensing, use or storage of hazardous materials.”
- Explanation:
  - This basic provisions section applies whether the use qualifies for an “H” occupancy label or whether it is exempt.
  - Any hazardous material in any amount is controlled by this section.

---

**HAZARDOUS MATERIALS 414.1.1 OTHER PROVISIONS**

- “Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of Section 415 and the International Fire Code.”
- Section 415 goes through each H occupancy in detail, and shows what to do when a material is in excess of the exempt amounts.
- IFC provides further information.
HAZARDOUS MATERIALS
414.1.2 MATERIALS

- The safe design of hazardous material occupancies is material dependent. Individual material requirements are also found in Sections 307 and 415, and in the International Mechanical Code and the International Fire Code.

- Explanation: the bldg. design depends on the material!

- Every type of material poses a different hazard, so it requires different precautions.

- i.e. You do different things where things blow up than you do where a liquid could burn you.

HAZARDOUS MATERIALS
414.1.2.1

- Level 2 and 3 aerosol products, aerosol cooking spray products and plastic aerosol 3 products shall be stored and displayed in accordance with the International Fire Code.

- See Section 311.2 and the International Fire Code for occupancy group requirements.
HAZARDOUS MATERIALS
414.1.3 INFORMATION REQUIRED

- A report SHALL be submitted to CBO that identifies:
  - Maximum expected amounts
  - Identify if it’s stored, use-open or use-closed
  - Identify classification categories
  - Methods of protection to be used
- Must be a report prepared by an approved person or agency

HAZARDOUS MATERIALS
414.2 CONTROL AREAS

- The control area can be the whole building, the whole floor or the whole room or rooms.
- Separated by fire barriers or horiz. Assemblies
- Floors & supporting construction must be 2 hr rated
  - Exceptions for 1 hr in Type IIA, IIIA, VA sprinkled buildings of 3 stories or less
HAZARDOUS MATERIALS
414.2.1 CONST. REQUIREMENTS

Control areas shall be separated from each other by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both.

Note: Table 5003.8.3.2 of the IFC is the same as Table 414.2.2 in the IBC.

414.2.3
NUMBER OF CONTROL AREAS

- The maximum number of control areas within a building shall be in accordance with Table 414.2.2.
- For the purposes of determining the number of control areas within a building, each portion of a building separated by one or more fire walls complying with Section 706 shall be considered a separate building.
### 414.2.4 CONTROL AREAS

#### FIRE RESISTANCE RATINGs

- The required fire-resistance rating for fire barriers shall be in accordance with Table 414.2.2. The floor assembly of the control area and the construction supporting the floor of the control area shall have a minimum 2-hour fire-resistance rating.

---

#### Exception:

- The floor assembly of the control area and the construction supporting the floor of the control area are allowed to be 1-hour fire-resistance-rated in buildings of Types IIA, IIIA, IV and VA construction, provided that both of the following conditions exist:
  - 1. The building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1; and
  - 2. The building is three stories or less above grade plane.
414.2.5 HAZ. MAT. IN GROUP M DISPLAY AND STORAGE AREAS AND IN GROUP S STORAGE AREAS

Hazardous materials located in Group M and Group S occupancies shall be in accordance with Sections 414.2.5.1 through 414.2.5.3.

414.2.5.1 NONFLAMMABLE SOLIDS AND NONFLAMMABLE AND NONCOMBUSTIBLE LIQUIDS

The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials permitted within a single control area of a Group M display and storage area, a Group S storage area or an outdoor control area is permitted to exceed the maximum allowable quantities per control area specified in Tables 307.1(1) and 307.1(2) without classifying the building or use as a Group H occupancy, provided that the materials are displayed and stored in accordance with the International Fire Code and quantities do not exceed the maximum allowable specified in Table 414.2.5(1).
414.2.5.2 FLAMMABLE AND COMBUSTIBLE LIQUIDS

In Group M occupancy wholesale and retail sales uses, indoor storage of flammable and combustible liquids shall not exceed the maximum allowable quantities per control area as indicated in Table 414.2.5(2), provided that the materials are displayed and stored in accordance with the International Fire Code.
**414.2.5.3 AEROSOL PRODUCTS**

- The maximum quantity of aerosol products, aerosol cooking spray products or plastic aerosol 3 products in Group M occupancy retail display areas, storage areas adjacent to retail display areas and retail storage areas shall be in accordance with the International Fire Code.
414.3 VENTILATION.

Rooms, areas or spaces in which explosive, corrosive, combustible, flammable or highly toxic dusts, mists, fumes, vapors or gases are or have the potential to be emitted due to the processing, use, handling or storage of materials shall be mechanically ventilated where required by this code, the International Fire Code or the International Mechanical Code.

HAZARDOUS EXHAUST
IMC 510.2

A hazardous exhaust system shall be required wherever operations involving the handling or processing of hazardous materials, in the absence of such exhaust systems and under normal operating conditions, have the potential to create one of the following conditions:

1. A flammable vapor, gas, fume, mist or dust is present in concentrations exceeding 25 percent of the lower flammability limit of the substance for the expected room temperature.

2. A vapor, gas, fume, mist or dust with a health-hazard rating of 4 is present in any concentration.

3. A vapor, gas, fume, mist or dust with a health-hazard rating of 1, 2 or 3 is present in concentrations exceeding 1 percent of the median lethal concentration of the substance for acute inhalation toxicity.
HAZARDOUS EXHAUST

- Lower Flammable Limit:
- The minimum concentration of vapor in air at which propagation of flame will occur in the presence of an ignition source.

414.3 “H” VENTILATION CONT’D.

- Emissions generated at workstations shall be confined to the area in which they are generated as specified in the International Fire Code and the International Mechanical Code.
414.4 HAZARDOUS MATERIAL SYSTEMS.

- Systems involving hazardous materials shall be suitable for the intended application.
- Controls shall be designed to prevent materials from entering or leaving process or reaction systems at other than the intended time, rate or path.
- Automatic controls, where provided, shall be designed to be fail safe.

414.5 INSIDE STORAGE, DISPENSING AND USE.

- The inside storage, dispensing and use of hazardous materials shall be in accordance with Sections 414.5.1 through 414.5.4 of this code and the International Fire Code.
414.5.1 (INSIDE STORAGE, DISPENSING & USE) EXPLOSION CONTROL.

Must be provided per the IFC if Table 414.5.1 requires
- Where quantities of hazmat exceed MAQ in Table 307.1(1) or;
- Where structure, room or space is occupied for purposes involving explosion hazards as required by section 415.
414.5.1 (INSIDE STORAGE, DISPENSING & USE) EXPLOSION CONTROL CONT’D.

- Barricade Const.
  - Per NFPA 495
  - A structure made to withstand explosion and that is shielded by dirt mounds or natural hills or thick forests
  - See IFC 3302.1 for details

414.5.2 STANDBY OR EMERGENCY POWER.

- Where required by the International Fire Code or this code, mechanical ventilation, treatment systems, temperature control, alarm, detection or other electrically operated systems shall be provided with emergency or standby power in accordance with Section 2702. For storage and use areas for highly toxic or toxic materials, see Sections 6004.2.2.8 and 6004.3.4.2 of the International Fire Code.
414.5.2.1 EXEMPT APPLICATIONS

- Emergency or standby power is not required for the mechanical ventilation systems provided for any of the following:
  - 1. Storage of Class IB and IC flammable and combustible liquids in closed containers not exceeding 6.5 gallons capacity.
  - 2. Storage of Class 1 and 2 oxidizers.
  - 4. Storage of asphyxiating, irritant and radioactive gases.

Standby power for mechanical ventilation, treatment systems and temperature control systems shall not be required where an approved fail-safe engineered system is installed.
414.5.3 - SPILL CONTROL, DRAINAGE AND CONTAINMENT

- Rooms, buildings or areas occupied for the storage of solid and liquid hazardous materials shall be provided with a means to control spillage and to contain or drain off spillage and fire protection water discharged in the storage area where required in the International Fire Code.
- The methods of spill control shall be in accordance with the International Fire Code.

414.6 OUTDOOR STORAGE, DISPENSING AND USE.

- The outdoor storage, dispensing and use of hazardous materials shall be in accordance with the International Fire Code.
414.6.1
WEATHER PROTECTION.

Where weather protection is provided for sheltering outdoor hazardous material storage or use areas, such areas shall be considered outdoor storage or use when the weather protection structure complies with Sections 414.6.1.1 through 414.6.1.3.

414.6.1.1
WALLS.

Walls shall not obstruct more than one side of the structure.

- Exception: Walls shall be permitted to obstruct portions of multiple sides of the structure, provided that the obstructed area does not exceed 25 percent of the structure's perimeter.
414.6.1.2
SEPARATION DISTANCE.

The distance from the structure to buildings, lot lines, public ways or means of egress to a public way shall not be less than the distance required for an outside hazardous material storage or use area without weather protection. (See IFC 5003.12)

414.6.1.3
NONCOMBUSTIBLE CONSTRUCTION.

The overhead structure shall be of approved noncombustible construction with a maximum area of 1,500 square feet.

Exception: The increases permitted by Section 506 apply.
SAMPLE PROPOSAL: CBD EXTRACTION

Given: a customer wants to start a CBD Extraction Business
They will be using Ethyl Alcohol for the process
Is there anything hazardous with this? Physical or health hazard? Is it an “H” occupancy?

COMBUSTIBLE FIBERS

Readily ignitable and free-burning materials in a fibrous or shredded form, such as cocoa fiber, cloth, cotton, excelsior, hay, hemp, henequen, istle, jute, kapok, oakum, rags, sisal, Spanish moss, straw, tow, wastepaper, certain synthetic fibers or other like materials.
This definition does not include densely packed baled cotton.

Group H-3
- Buildings and structures containing materials that readily support combustion or that pose a physical hazard shall be classified as Group H-3. Such materials shall include, but not be limited to, the following:
  - Combustible fibers, other than densely packed baled cotton

IS IT A GROUP H OCCUPANCY?
- Probably and H-3 depending on dust particle sizes that could make it a H-2
- Sections 414 & 415 apply
- IFC Requirements apply
EXTRACTION

- A solvent is used to extract the oil from the dried plant.
- The product is soaked, mixed and stirred in the solvent.
- The solvent/oil solution is then boiled to evaporate the solvent to leave the oil.

Solvents include
- Alcohol
- Naphtha
- Ether
- Butane

- All flammable liquids or gases
- Owner wants to store 2,000 gallons of Ethyl Alcohol in building.
Ethyl Alcohol = Class IB Flammable Liquid
MAXIMUM ALLOWABLE QUANTITIES (MAQ)

- Ethyl Alcohol
  - 120 gallons storage
  - 120 gallons closed use
  - 30 gallons open use

- Sprinklered Building
  - 240 gallons storage
  - 240 gallons closed use
  - 60 gallons open use

IS IT A GROUP H OCCUPANCY?

- Yes, 2,000 gallons exceeds MAQ
- Section 414 and 415 apply
- IFC Requirements apply
HIGH-HAZARD GROUP H-2

- Buildings and structures containing materials that pose a deflagration hazard or a hazard from accelerated burning shall be classified as Group H-2.
- Such materials shall include, but not be limited to, the following:
  - Class I, II or IIIA flammable or combustible liquids that are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 pounds per square inch gauge.
  - Combustible dusts
  - Flammable gases

HIGH HAZARD GROUP H-3

- Buildings and structures containing materials that readily support combustion (it burns) or that pose a physical hazard shall be classified as Group H-3.
- Such materials shall include, but not be limited to, the following:
HIGH HAZARD GROUP H-3

- Class I, II or IIIA flammable or combustible liquids that are used or stored in normally closed containers or systems pressurized at 15 pounds per square inch gauge or less

SECTION 415
GROUPS H-1, H-2, H-3, H-4 & H-5

415.1 SCOPE:
- The provisions of Sections 415.1 through 415.8 shall apply to the storage and use of hazardous materials in excess of the maximum allowable quantities per control area listed in Section 307.1.
- Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of Section 414 and the International Fire Code.
DEFINITIONS

GAS CABINET. A fully enclosed, noncombustible enclosure used to provide an isolated environment for compressed gas cylinders in storage or use. Doors and access ports for exchanging cylinders and accessing pressure-regulating controls are allowed to be included.

EXHAUSTED ENCLOSURE. An appliance or piece of equipment that consists of a top, a back and two sides providing a means of local exhaust for capturing gases, fumes, vapors and mists. Such enclosures include laboratory hoods, exhaust fume hoods and similar appliances and equipment used to locally retain and exhaust the gases, fumes, vapors and mists that could be released. Rooms or areas provided with general ventilation, in themselves, are not exhausted enclosures.
DEFINITIONS

1. The keeping, retention or leaving of hazardous materials in closed containers, tanks, cylinders or similar vessels, or
2. Vessels supplying operations through closed connections to the vessel.

Sodium Hypochlorite: a corrosive. MAQ 500 gallons

AUTOMATIC FIRE DETECTION AND SPRINKLER SYSTEM

15.3 Automatic fire detection systems.
- Group H occupancies shall be provided with an automatic fire detection system in accordance with Section 907.2.

15.4 Automatic sprinkler system.
- Group H occupancies shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.2.5.
415.5
EMERGENCY ALARMS

Emergency alarms for the detection and notification of an emergency condition in Group H occupancies shall be provided as set forth herein.

415.5.1
STORAGE

- An approved manual emergency alarm system shall be provided in buildings, rooms or areas used for storage of hazardous materials.
- Emergency alarm-initiating devices shall be installed outside of each interior exit or exit access door of storage buildings, rooms or areas.
- Activation of an emergency alarm-initiating device shall sound a local alarm to alert occupants of an emergency situation involving hazardous materials.
415.5.2
DISPENSING, USE AND HANDLING

- Where hazardous materials having a hazard ranking of 3 or 4 in accordance with NFPA 704 are transported through corridors, interior exit stairways or ramps, or exit passageways, there shall be an emergency telephone system, a local manual alarm station or an approved alarm-initiating device at not more than 150-foot intervals and at each exit and exit access doorway throughout the transport route.

- The signal shall be relayed to an approved central, proprietary or remote station service or constantly attended on-site location and shall initiate a local audible alarm.

415.5.3
SUPERVISION

- Emergency alarm systems required by Section 415.5.1 or 415.5.2 shall be electrically supervised and monitored by an approved central, proprietary or remote station service or shall initiate an audible and visual signal at a constantly attended on-site location.
415.5.4  
**EMERGENCY ALARM SYSTEM**

- Emergency alarm systems required by Section 415.5.1 or 415.5.2 shall be provided with emergency or standby power in accordance with Section 2702.2.

415.6  
**FIRE SEPARATION DISTANCE.**

- Group H occupancies shall be located on property in accordance with the other provisions of this chapter.
- In Groups H-2 and H-3, not less than 25 percent of the perimeter wall of the occupancy shall be an exterior wall.
415.6.1 - ROOMS FOR FLAMMABLE OR COMBUSTIBLE LIQUID USE, DISPENSING OR MIXING IN OPEN SYSTEMS

Rooms for flammable or combustible liquid use, dispensing or mixing in open systems having a floor area of not more than 500 square feet need not be located on the outer perimeter of the building where they are in accordance with the International Fire Code and NFPA 30.

415.6.2 - LIQUID STORAGE ROOMS AND ROOMS FOR FLAMMABLE OR COMBUSTIBLE LIQUID USE IN CLOSED SYSTEMS

Liquid storage rooms and rooms for flammable or combustible liquid use in closed systems, having a floor area of not more than 1,000 square feet need not be located on the outer perimeter where they are in accordance with the International Fire Code and NFPA 30.
415.6.3 SPRAY PAINT BOOTHs

Spray paint booths that comply with the International Fire Code need not be located on the outer perimeter.

415.6.4 GROUP H OCCUPANCY MINIMUM FIRE SEP. DISTANCE.

Regardless of any other provisions, buildings containing Group H occupancies shall be set back to the minimum fire separation distance as set forth in Sections 415.6.4.1 through 415.6.4.4.

Distances shall be measured from the walls enclosing the occupancy to lot lines, including those on a public way.
415.6.4 GROUP H OCCUPANCY
MINIMUM FIRE SEP. DISTANCE

Distances to assumed lot lines established for the purpose of determining exterior wall and opening protection are not to be used to establish the minimum fire separation distance for buildings on sites where explosives are manufactured or used when separation is provided in accordance with the quantity distance tables specified for explosive materials in the International Fire Code.

415.6.4.1 GROUP H-1

Group H-1 occupancies shall be set back not less than 75 feet and not less than required by the International Fire Code.

- Exception: Fireworks manufacturing buildings separated in accordance with NFPA 1124.
415.6.4.2 GROUP H-2

Group H-2 occupancies shall be set back not less than 30 feet where the area of the occupancy is greater than 1,000 square feet and it is not required to be located in a detached building.

415.6.4.3 GROUPS H-2 AND H-3

Group H-2 and H-3 occupancies shall be set back not less than 50 feet where a detached building is required (see Table 415.5.2).
415.6.4.4 EXPLOSIVE MATERIALS

- Group H-2 and H-3 occupancies containing materials with explosive characteristics shall be separated as required by the International Fire Code.
- Where separations are not specified, the distances required shall be determined by a technical report issued in accordance with Section 414.1.3.

415.6.5.1 WALL AND OPENING PROTECTION

- Where a detached building is required by Table 415.6.5, wall and opening protection based on fire separation distance is not required.

415.7 SPECIAL PROVISIONS FOR GROUP H-1 OCCUPANCIES.

- Group H-1 occupancies shall be in detached buildings not used for other purposes.
- Roofs shall be of lightweight construction with suitable thermal insulation to prevent sensitive material from reaching its decomposition temperature.
- Group H-1 occupancies containing materials that are in themselves both physical and health hazards in quantities exceeding the maximum allowable quantities per control area in Table 307.1(2) shall comply with requirements for both Group H-1 and H-4 occupancies.
415.7.1 FLOORS IN H1 STORAGE ROOMS.

Floors in storage areas for organic peroxides, pyrophoric materials and unstable (reactive) materials shall be of liquid-tight, noncombustible construction.

415.8 SPECIAL PROVISIONS FOR GROUP H-2 AND H-3 OCCUPANCIES.

Group H-2 and H-3 occupancies containing quantities of hazardous materials in excess of those set forth in Table 415.6.5 shall be in detached buildings used for manufacturing, processing, dispensing, use or storage of hazardous materials.
415.8 SPECIAL PROVISIONS FOR GROUP H-2 AND H-3 OCCUPANCIES.

- Materials specified for Group H-1 occupancies in Section 307.3 are permitted to be located within Group H-2 or H-3 detached buildings provided that the amount of materials per control area do not exceed the maximum allowed quantity specified in Table 307.1(1).

415.8.1 MULTIPLE HAZARDS

- Group H-2 or H-3 occupancies containing materials which are in themselves both physical and health hazards in quantities exceeding the maximum allowable quantities per control area in Table 307.1(2) shall comply with requirements for Group H-2, H-3 or H-4 occupancies as applicable.
415.8.2 SEPARATION OF INCOMPATIBLE MATERIALS

Hazardous materials other than those listed in Table 415.3.2 shall be allowed in manufacturing, processing, dispensing, use or storage areas when separated from incompatible materials in accordance with the provisions of the International Fire Code.

415.8.3 WATER REACTIVES

Group H-2 and H-3 occupancies containing water-reactive materials shall be resistant to water penetration. Piping for conveying liquids shall not be over or through areas containing water reactives, unless isolated by approved liquid-tight construction.

- Exception: Fire protection piping shall be permitted over or through areas containing water reactives without isolating it with liquid-tight construction.
415.8.4 FLOORS IN H2, H3 STORAGE ROOMS.

Floors in storage areas for organic peroxides, oxidizers, pyrophoric materials, unstable (reactive) materials and water-reactive solids and liquids shall be of liquid-tight, noncombustible construction.

415.8.5 WATERPROOF ROOM.

Rooms or areas used for the storage of water-reactive solids and liquids shall be constructed in a manner that resists the penetration of water through the use of waterproof materials. Piping carrying water for other than approved automatic fire sprinkler systems shall not be within such rooms or areas.
415.9 GROUP H-2.

Occupancies in Group H-2 shall be constructed in accordance with Sections 415.6.1 through 415.6.4 and the International Fire Code.

415.9.1 (H2) FLAMMABLE AND COMBUSTIBLE LIQUIDS.

The storage, handling, processing and transporting of flammable and combustible liquids in Group H-2 and H-3 occupancies shall be in accordance with Sections 415.9.1.1 through 415.9.1.9, the International Mechanical Code and the International Fire Code.
415.9.1.1 MIXED OCCUPANCIES.

Where the storage tank area is located in a building of two or more occupancies and the quantity of liquid exceeds the maximum allowable quantity for one control area, the use shall be completely separated from adjacent occupancies in accordance with the requirements of Section 508.4.

415.9.1.1.1 STORAGE TANK HEIGHT EXCEPTION.

Where storage tanks are located within a building not more than one story above grade plane, the height limitation of Section 504 shall not apply for Group H.
415.9.1.2 TANK PROTECTION.

- Storage tanks shall be noncombustible and protected from physical damage.
- Fire barriers or horizontal assemblies or both around the storage tank(s) shall be permitted as the method of protection from physical damage.

415.9.1.3 TANKS.

- Storage tanks shall be approved tanks conforming to the requirements of the International Fire Code.
- IFC 5004.2 covers tank storage provisions for flammable and combustible liquids.
415.9.1.4 LEAKAGE CONTAINMENT.

- A liquid-tight containment area compatible with the stored liquid shall be provided. The method of spill control, drainage control and secondary containment shall be in accordance with the International Fire Code.

415.9.1.4 LEAKAGE CONTAINMENT.

- Exception: Rooms where only double-wall storage tanks conforming to Section 415.9.1.3 are used to store Class I, II and IIIA flammable and combustible liquids shall not be required to have a leakage containment area.
415.9.1.5 LEAKAGE ALARM.
- An approved automatic alarm shall be provided to indicate a leak in a storage tank and room.
- The alarm shall sound an audible signal, 15 dBA above the ambient sound level, at every point of entry into the room in which the leaking storage tank is located.
- An approved sign shall be posted on every entry door to the tank storage room
- Sign must indicate the potential hazard of the interior room or,
- the sign shall state: WARNING, WHEN ALARM SOUNDS, THE ENVIRONMENT WITHIN THE ROOM MAY BE HAZARDOUS.
- The leakage alarm shall have a monitored signal

415.9.1.6 TANK VENT.
- Storage tank vents for Class I, II or IIIA liquids shall terminate to the outdoor air in accordance with the International Fire Code.
415.9.1.7 ROOM VENTILATION.

- Storage tank areas storing Class I, II or IIIA liquids shall be provided with mechanical ventilation. The mechanical ventilation system shall be in accordance with the International Mechanical Code and the International Fire Code.

415.9.1.8 EXPLOSION VENTING.

- Where Class I liquids are being stored, explosion venting shall be provided in accordance with the International Fire Code.
- IFC 5004.6 Explosion control.
415.9.1.9 Tank Openings Other Than Vents.

Tank openings other than vents from tanks inside buildings shall be designed to ensure that liquids or vapor concentrations are not released inside the building.

415.9.2 Liquefied Petroleum Gas Facilities.

The construction and installation of liquefied petroleum gas facilities shall be in accordance with the requirements of this code, the International Fire Code, the International Mechanical Code, the International Fuel Gas Code, and NFPA 58.
415.9.3 DRY CLEANING PLANTS.

- The construction and installation of dry cleaning plants shall be in accordance with the requirements of this code, and
  - the International Mechanical Code,
  - the International Plumbing Code and NFPA 32.
  - Dry cleaning solvents and systems shall be classified in accordance with the International Fire Code.

415.10 GROUPS H-3 AND H-4.

- Groups H-3 and H-4 shall be constructed in accordance with the applicable provisions of this code and the International Fire Code.
415.10.1 FLAMMABLE AND COMBUSTIBLE LIQUIDS.

The storage, handling, processing and transporting of flammable and combustible liquids in Group H-3 occupancies shall be in accordance with Section 415.9.1. (the same as it was for H2).

415.10.2 GAS ROOMS.

When gas rooms are provided, such rooms shall be separated from other areas by not less than 1-hour fire barriers or horizontal assemblies, or both.
415.10.3 FLOORS IN STORAGE ROOMS.

Floors in storage areas for corrosive liquids and highly toxic or toxic materials shall be of liquid-tight, noncombustible construction.

415.10.4 SEPARATION-HIGHLY TOXIC SOLIDS AND LIQUIDS.

Highly toxic solids and liquids not stored in approved hazardous materials storage cabinets shall be isolated from other hazardous materials storage by not less than 1-hour fire barriers or horizontal, or both.
415.11 GROUP H-5.

In addition to the requirements set forth elsewhere in this code, Group H-5 shall comply with the provisions of Sections 415.11.1 through 415.11.12 and the International Fire Code.

Bromine (toxic) is often used in circuit boards.

415.11.1.1.1 AGGREGATE QUANTITIES

The aggregate quantities of hazardous materials stored and used in a single fabrication area shall not exceed the quantities set forth in Table 415.11.1.1.

Exception: The quantity limitations for any hazard category in Table 415.11.1.1 shall not apply where the fabrication area contains quantities of hazardous materials not exceeding the maximum allowable quantities per control area established by Tables 307.1(1) and 307.1(2).

### 415.11.1.1.2 HAZARDOUS PRODUCTION MATERIALS.

The maximum quantities of hazardous production materials (HPM) stored in a single fabrication area shall not exceed the maximum allowable quantities per control area established by Tables 307.1(1) and 307.1(2).
415.11.1.2 SEPARATION.

Fabrication areas, whose sizes are limited by the quantity of hazardous materials allowed by Table 415.11.2.1.1, shall be separated
1. from each other,
2. from corridors and
3. from other parts of the building by
   - not less than 1-hour fire barriers constructed in accordance with Section 707 or
   - horizontal assemblies constructed in accordance with Section 712, or
4. both.

Exceptions:
1. Doors within such fire barrier walls, including doors to corridors, shall be only self-closing fire door assemblies having a fire protection rating of not less than 3/4 hour.
2. Windows between fabrication areas and corridors are permitted to be fixed glazing listed and labeled for a fire protection rating of at least 3/4 hour in accordance with Section 715.

415.11.1.3 LOCATION OF OCCUPIED LEVELS.

Occupied levels of fabrication areas shall be located at or above the first story above grade plane.
415.11.1.4 FLOORS.

- Except for surfacing, floors within fabrication areas shall be of noncombustible construction.
- Openings through floors of fabrication areas are permitted to be unprotected where...
- The interconnected levels are used solely for mechanical equipment directly related to such fabrication areas (see also Section 415.11.1.5).
- Floors forming a part of an occupancy separation shall be liquid tight.

415.11.1.5 SHAFTS AND OPENINGS THROUGH FLOORS.

- Elevator shafts, vent shafts and other openings shall be enclosed when required by Section 712 and 713.
- Mechanical, duct and piping penetrations within a fabrication area shall not extend through more than two floors.
- The annular space around penetrations for cables, cable trays, tubing, piping, conduit or ducts shall be sealed at the floor level to restrict the movement of air.
- The fabrication area, including the areas through which the ductwork and piping extend, shall be considered a single conditioned environment.
415.11.1.6 VENTILATION.

- Mechanical exhaust ventilation at the rate of not less than 1 cubic foot per minute per square foot of floor area shall be provided throughout the portions of the fabrication area where HPM are used or stored.
- The exhaust air duct system of one fabrication area shall not connect to another duct system outside that fabrication area within the building.

A ventilation system shall be provided to capture and exhaust gases, fumes and vapors at workstations.

Two or more operations at a workstation shall not be connected to the same exhaust system where either one or the combination of the substances removed could constitute a fire, explosion or hazardous chemical reaction within the exhaust duct system.

- Exhaust ducts penetrating occupancy separations shall be contained in a shaft of equivalent fire-resistance-rated construction.
- Exhaust ducts shall not penetrate fire walls.
- Fire dampers shall not be installed in exhaust ducts.
415.11.1.7 TRANSPORTING HAZARDOUS PRODUCTION MATERIALS TO FABRICATION AREAS

- HPM shall be transported to fabrication areas through
  - enclosed piping or tubing systems that comply with Section 415.8.6.1,
  - through service corridors complying with Section 415.8.4, or
  - in corridors as permitted in the exception to Section 415.8.3.
- The handling or transporting of HPM within service corridors shall comply with the International Fire Code.

415.11.1.8.1 (ELECTRICAL) GENERAL

- Electrical equipment and devices within the fabrication area shall comply with NFPA 70. The requirements for hazardous locations need not be applied where the average air change is at least four times that set forth in Section 415.8.2.6 and where the number of air changes at any location is not less than three times that required by Section 415.8.2.6. The use of re-circulated air shall be permitted.
415.11.1.8.2 WORKSTATIONS

Workstations shall not be energized without adequate exhaust ventilation. See Section 415.11.1.6 for workstation exhaust ventilation requirements.

Exceptions!

415.11.2 CORRIDORS

Corridors shall comply with Chapter 10 and shall be separated from fabrication areas as specified in Section 415.11.1.2.

Corridors shall not contain HPM and shall not be used for transporting such materials except through closed piping systems as provided in Section 415.11.7.4.
415.11.3.1
SERVICE CORRIDORS
- Service corridors shall be separated from corridors as required by Section 415.11.1.2
- Service corridors shall not be used as a required corridor.

415.11.3.2
MECHANICAL VENTILATION
- Service corridors shall be mechanically ventilated as required by Section 415.11.1.6 or at not less than six air changes per hour.
415.11.3.3 (SERVICE CORRIDORS) MEANS OF EGRESS.

- The maximum travel distance from any point in a service corridor to an exit, exit access corridor or door into a fabrication area shall not exceed 75 feet.
- Dead ends shall not exceed 4 feet in length!!
- There shall be not less than two exits.
- Not more than one-half of the required means of egress shall require travel into a fabrication area.
- Doors from service corridors shall swing in the direction of egress travel and shall be self-closing.

415.11.3.4 (SERVICE CORRIDORS) MINIMUM WIDTH.

- The minimum clear width of a service corridor shall be 5 feet, or 33 inches wider than the widest cart or truck used in the corridor, whichever is greater.
415.11.4 
SERVICE CORRIDORS

- Emergency alarm systems shall be provided in accordance with this section and Sections 415.5.1 and 415.5.2.
- The maximum allowable quantity per control area provisions shall not apply to emergency alarm systems required for HPM.

- An emergency alarm system shall be provided in service corridors, with at least one alarm device in each service corridor.

415.11.4.2 CORRIDORS AND INTERIOR EXIT STAIRWAYS AND RAMPS

- Emergency alarms for corridors, interior exit stairways and ramps and exit passageways shall comply with Section 414.7.2.
415.11.4.3 - LIQUID STORAGE ROOMS, HPM ROOMS AND GAS ROOMS.

- Emergency alarms for liquid storage rooms, HPM rooms and gas rooms shall comply with Section 415.5.1. (the general emergency alarm provision for H occupancies)

415.11.4.4 ALARM-INITIATING DEVICES.

- An approved emergency telephone system, local alarm manual pull stations, or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.
415.11.4.5 ALARM SIGNALS.

- Activation of the emergency alarm system shall sound a local alarm and transmit a signal to the emergency control station.

415.11.5 STORAGE OF HAZARDOUS PRODUCTION MATERIALS.

- Storage of HPM in fabrication areas shall be within approved or listed storage cabinets or gas cabinets or within a workstation.
- The storage of HPM in quantities greater than those listed in Section 1804.2 of the International Fire Code shall be in liquid storage rooms, HPM rooms or gas rooms as appropriate for the materials stored.
- The storage of other hazardous materials shall be in accordance with other applicable provisions of this code and the International Fire Code.
415.11.6.1 CONSTRUCTION OF HPM ROOMS AND GAS ROOMS.

- HPM rooms and gas rooms shall be separated from other areas by:
  - fire barriers constructed or horizontal assemblies, or
  - both.
- The minimum fire-resistance rating shall be 2 hours where the area is 300 square feet or more and 1 hour where the area is less than 300 square feet.

415.11.6.2 CONSTRUCTION OF LIQUID STORAGE ROOMS.

- Liquid storage rooms shall be constructed in accordance with the following requirements:
  - 1. Rooms in excess of 500 square feet shall have at least one exterior door approved for fire department access.
  - 2. Rooms shall be separated from other areas by fire barriers or horizontal, or both.
  - 3. Shelving, racks and wainscotting in such areas shall be of noncombustible construction or wood of not less than 1-inch nominal thickness.
  - 4. Rooms used for the storage of Class I flammable liquids shall not be located in a basement.
415.11.6.3 CONSTRUCTION OF FLOORS.

- Except for surfacing, floors of HPM rooms and liquid storage rooms shall be of noncombustible liquid-tight construction.
- Raised grating over floors shall be of noncombustible materials.

415.11.6.4 LOCATION.

- Where HPM rooms, liquid storage rooms and gas rooms are provided, they shall have at least one exterior wall and such wall shall be not less than 30 feet from lot lines, including lot lines adjacent to public ways.
415.11.6.5 EXPLOSION CONTROL

- Explosion control shall be provided where required by Section 414.5.1. (recall the explosion control table with barricades and venting depending on material)

415.11.6.6 EXITS.

- Where two exits are required from HPM rooms, liquid storage rooms and gas rooms, one shall be directly to the outside of the building.
415.11.6.7

DOORS.

Doors in a fire barrier wall, including doors to corridors, shall be self-closing fire door assemblies having a fire-protection rating of not less than 3/4 hour.

415.11.6.8

VENTILATION.

Mechanical exhaust ventilation shall be provided in liquid storage rooms, HPM rooms and gas rooms at the rate of not less than 1 cubic foot per minute per square foot of floor area or six air changes per hour.

Exhaust ventilation for gas rooms shall be designed to operate at a negative pressure in relation to the surrounding areas and direct the exhaust ventilation to an exhaust system.
415.11.6.9
EMERGENCY ALARM SYSTEM

- An approved emergency alarm system shall be provided for HPM rooms, liquid storage rooms and gas rooms.
- Activation of an emergency alarm-initiating device shall sound a local alarm and transmit a signal to the emergency control station.
- An approved emergency telephone system, local alarm manual pull stations or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.

- Emergency alarm-initiating devices shall be installed outside of each interior exit door of such rooms.

415.11.7
PIPING AND TUBING.

- Hazardous production materials piping and tubing shall comply with this section and ASME B31.3.
415.11.7.1 - HPM HAVING A HEALTH-HAZARD RANKING OF 3 OR 4

Systems supplying HPM liquids or gases having a health-hazard ranking of 3 or 4 shall be welded throughout, except for connections, to the systems that are within a ventilated enclosure if the material is a gas, or an approved method of drainage or containment is provided for the connections if the material is a liquid.

415.11.7.2 LOCATION IN SERVICE CORRIDOR

Hazardous production materials supply piping or tubing in service corridors shall be exposed to view.
415.11.7.3 EXCESS FLOW CONTROL.

- Where HPM gases or liquids are carried in pressurized piping above 15 pounds per square inch gauge (psig), excess flow control shall be provided.
- Where the piping originates from within a liquid storage room, HPM room or gas room, the excess flow control shall be located within the liquid storage room, HPM room or gas room.
- Where the piping originates from a bulk source, the excess flow control shall be located as close to the bulk source as practical.

415.11.7.4 PIPING INSTALLATIONS IN CORRIDORS AND ABOVE OTHER OCCUPANCIES.

- The installation of HPM piping and tubing within the space defined by the walls of corridors and the floor or roof above, or in concealed spaces above other occupancies, shall be in accordance with Sections 415.11.7.1 through 415.11.7.3 and the following conditions:
415.11.7.4 PIPING INSTALLATIONS IN CORRIDORS AND ABOVE OTHER OCCUPANCIES

1. Automatic sprinklers shall be installed within the space unless the space is less than 6 inches (152 mm) in the least dimension.
2. Ventilation not less than six air changes per hour shall be provided. The space shall not be used to convey air from any other area.
3. Where the piping or tubing is used to transport HPM liquids, a receptor shall be installed below such piping or tubing. The receptor shall be designed to collect any discharge or leakage and drain it to an approved location. The 1-hour enclosure shall not be used as part of the receptor.
4. HPM supply piping and tubing and nonmetallic waste lines shall be separated from the corridor and from occupancies other than Group H-5 by fire barriers or by an approved method or assembly that has a fire-resistance rating of not less than 1 hour. Access openings into the enclosure shall be protected by approved fire-protection-rated assemblies.

5. Readily accessible manual or automatic remotely activated fail-safe emergency shutoff valves shall be installed on piping and tubing other than waste lines at the following locations:
   5.1. At branch connections into the fabrication area.
   5.2. At entries into corridors.

Exception: Transverse crossings of the corridors by supply piping that is enclosed within a ferrous pipe or tube for the width of the corridor need not comply with Items 1 through 5.
415.11.6.5
IDENTIFICATION.

- Piping, tubing and HPM waste lines shall be identified in accordance with ANSI A13.1 to indicate the material being transported.

415.11.7
GAS DETECTION SYSTEMS.

- A gas detection system complying with Section 916 shall be provided for HPM gases where the physiological warning threshold level of the gas is at a higher level than the accepted permissible exposure limit (PEL) for the gas and for flammable gases in accordance with Sections 415.11.8.1 through 415.11.8.2.
415.11.8.1
WHERE REQUIRED

- In fabrication areas when gas is used
- In HPM rooms when gas is used
- In gas cabinets
- In exhausted enclosures
- In gas rooms
  - When gasses are not in gas cabinets or exhausted enclosures
- In corridors and in the space between the corridors and the floor or roof above (see exc).

Exception: A continuous gas detection system is not required for occasional transverse crossings of the corridors by supply piping that is enclosed in a ferrous pipe or tube for the width of the corridor.

415.11.8.2
GAS DETECTION SYSTEM OPERATION.

The gas detection system shall be capable of monitoring the room, area or equipment in which the HPM gas is located at or below all the following gas concentrations:

1. Immediately dangerous to life and health (IDLH) values when the monitoring point is within an exhausted enclosure, ventilated enclosure or gas cabinet.
2. Permissible exposure limit (PEL) levels when the monitoring point is in an area outside an exhausted enclosure, ventilated enclosure or gas cabinet.
3. For flammable gases, the monitoring detection threshold level shall be vapor concentrations in excess of 25 percent of the lower flammable limit (LFL) when the monitoring is within or outside an exhausted enclosure, ventilated enclosure or gas cabinet.
4. Except as noted in this section, monitoring for highly toxic and toxic gases shall also comply with Chapter 37 of the International Fire Code.
415.11.8.2.1
ALARMS.

- The gas detection system shall initiate a local alarm and transmit a signal to the emergency control station when a short-term hazard condition is detected.
- The alarm shall be both visual and audible and shall provide warning both inside and outside the area where the gas is detected.
- The audible alarm shall be distinct from all other alarms.

415.11.8.2.2
SHUTOFF OF GAS SUPPLY.

- The gas detection system shall automatically close the shutoff valve at the source on gas supply piping and tubing related to the system being monitored for which gas is detected when a short-term hazard condition is detected.
415.11.8.2.2
SHUTOFF OF GAS SUPPLY.

1. Where the gas detection sampling point initiating the gas detection system alarm is within a gas cabinet or exhausted enclosure, the shutoff valve in the gas cabinet or exhausted enclosure for the specific gas detected shall automatically close.

2. Where the gas detection sampling point initiating the gas detection system alarm is within a room and compressed gas containers are not in gas cabinets or an exhausted enclosure, the shutoff valves on all gas lines for the specific gas detected shall automatically close.

Exception: Where the gas detection sampling point initiating the gas detection system alarm is at the use location or within a gas valve enclosure of a branch line downstream of a piping distribution manifold, the shutoff valve for the branch line located in the piping distribution manifold enclosure shall automatically close.
415.11.9
MANUAL FIRE ALARM SYSTEM.

- An approved manual fire alarm system shall be provided throughout buildings containing Group H-5.
- Activation of the alarm system shall initiate a local alarm and transmit a signal to the emergency control station.
- The fire alarm system shall be designed and installed in accordance with Section 907.

415.11.10
EMERGENCY CONTROL STATION.

- An emergency control station shall be provided in accordance with Sections 415.11.10.1 through 415.11.10.3.
  - At an approved location on the premises outside the fabrication area
  - Trained personnel shall continuously staff the station
415.11.10.3

**SIGNALS.**

- The emergency control station shall receive signals from emergency equipment and alarm and detection systems.
- Such emergency equipment and alarm and detection systems shall include, but not be limited to, the following where such equipment or systems are required to be provided either in this chapter or elsewhere in this code:
  1. Automatic sprinkler system alarm and monitoring systems.
  3. Emergency alarm systems.
  4. Continuous gas detection systems.
  5. Smoke detection systems.
  6. Emergency power system.
  7. Automatic detection and alarm systems for pyrophoric liquids and Class 3 water-reactive liquids required in Section 1805.2.3.4 of the International Fire Code.
  8. Exhaust ventilation flow alarm devices for pyrophoric liquids and Class 3 water-reactive liquids cabinet exhaust ventilation systems required in Section 1805.2.3.4 of the International Fire Code.
An emergency power system shall be provided in Group H-5 occupancies in accordance with Section 2702.

The emergency power system shall supply power automatically to the electrical systems specified in Section 415.11.11.1 when the normal electrical supply system is interrupted.

Emergency power shall be provided for electrically operated equipment and connected control circuits for the following systems:

1. HPM exhaust ventilation systems.
2. HPM gas cabinet ventilation systems.
3. HPM exhausted enclosure ventilation systems.
4. HPM gas room ventilation systems.
5. HPM gas detection systems.
6. Emergency alarm systems.
7. Manual fire alarm systems.
8. Automatic sprinkler system monitoring and alarm systems.
415.11.11.1 (H5 EMERGENCY POWER) REQUIRED ELECTRICAL SYSTEMS.

9. Automatic alarm and detection systems for pyrophoric liquids and Class 3 water-reactive liquids required in Section 2705.2.3.4 of the International Fire Code.

10. Flow alarm switches for pyrophoric liquids and Class 3 water-reactive liquids cabinet exhaust ventilation systems required in Section 2705.2.3.4 of the International Fire Code.

11. Electrically operated systems required elsewhere in this code or in the International Fire Code applicable to the use, storage or handling of HPM.

Exhaust ventilation systems are allowed to be designed to operate at not less than one-half the normal fan speed on the emergency power system where it is demonstrated that the level of exhaust will maintain a safe atmosphere.
415.11.12 - AUTOMATIC SPRINKLER SYSTEM PROTECTION IN EXHAUST DUCTS FOR HPM.

An approved automatic sprinkler system shall be provided in exhaust ducts conveying gases, vapors, fumes, mists or dusts generated from HPM in accordance with Sections 415.11.12.1 through 415.11.12.3 and the International Mechanical Code.

415.11.12.1 - METALLIC AND NON-COMBUSTIBLE NONMETALLIC EXHAUST DUCTS.

An approved automatic sprinkler system shall be provided in metallic and noncombustible nonmetallic exhaust ducts when all of the following conditions apply:

1. Where the largest cross-sectional diameter is equal to or greater than 10 inches.
2. The ducts are within the building.
3. The ducts are conveying flammable gases, vapors or fumes.
415.11.12.2 SPRINKLERS IN COMBUSTIBLE NONMETALLIC EXHAUST DUCTS.

Automatic sprinkler system protection shall be provided in combustible nonmetallic exhaust ducts where the largest cross-sectional diameter of the duct is equal to or greater than 10 inches.

Exceptions:

1. Ducts listed or approved for applications without automatic fire sprinkler system protection.
2. Ducts not more than 12 feet in length installed below ceiling level.
415.11.12.3 AUTOMATIC SPRINKLER LOCATIONS.

- Sprinkler systems shall be installed at 12-foot intervals in horizontal ducts and at changes in direction.
- In vertical ducts, sprinklers shall be installed at the top and at alternate floor levels.

IBC TABLE 1604.5 OCCUPANCY CATEGORY IV BUILDINGS

- Buildings designated as essential facilities
- Containing highly toxic materials over the Maximum Allowable Quantities.
IBC 1705.1.1 SPECIAL INSPECTIONS

- IBC allows the Building Division to require a special inspector for unusual materials, systems and designs that are not normally encountered.
- This could include Hazardous Materials
- Feel free to use this option to require a specialist
