Matthew McAllister
Chief Executive Officer
SolarAPP Foundation, Inc.

Re: SolarAPP+ Audit — Completion and Determination

Dear Mr. McAllister:

The International Code Council, Inc. (ICC) completed its post-production audit of the SolarAPP+ platform. ICC reviewed a representative sample of project reports generated by SolarAPP+ to evaluate whether the platform accurately reflects the applicable published code requirements identified below.

The audit covered six project reports, or artifacts, furnished by the SolarAPP Foundation. Each reviewed artifact included the associated project inputs or permit details and the resulting inspection checklist. The sample was structured around the System Design Categories active during the review period and included three Fire Bulletin artifact(s).

Scope and methodology

Between May 2, 2026 and August 31, 2026, ICC evaluated the furnished project inputs and the corresponding SolarAPP+ outputs against the applicable requirements of the 2024 International Residential Code (IRC), 2024 International Fire Code (IFC), and 2023 National Electrical Code (NEC).

For each artifact, ICC assessed whether the inspection checklist and related output correctly reflected the applicable code requirements given the project inputs provided. ICC documented its findings, categorized identified issues by severity, and provided recommended corrective actions in the non-publishable audit materials.

Review process and resolution of findings

This audit was an iterative process. ICC issued 262 detailed comments identifying items where the platform output did not fully reflect the applicable code requirements or where additional clarity was warranted. The SolarAPP Foundation responded to each finding and made corresponding updates to the platform or provided clarification regarding the SolarApp+ platform application. ICC subsequently reviewed those responses and updates and verified that the items it identified have been addressed and closed. The determination below reflects the state of the SolarAPP+ platform as of August 31, 2026, following that remediation.

Determination

Based on the completed audit, including SolarAPP's responses and the resulting platform updates, ICC has determined that the SolarAPP+ platform accurately reflects the applicable requirements of the 24 IRC, 24 IFC, and the 23 NEC.

Scope limitations

- This determination applies only to the SolarAPP+ content, project reports, code editions, and system configurations included within the completed audit and for which ICC provided deliverables.
- The audit was based on a representative sample of project reports. It was not a review of every report, every possible system configuration, or content outside the audited scope.
- The determination reflects the platform as of the completion date above. Subsequent changes to the platform, or to the applicable code editions, may warrant a further review.
- This letter does not alter the authority of the applicable authority having jurisdiction and does not replace project-specific review, approval, permitting, or inspection requirements.
- Any public statement referencing ICC or the conclusions of this review must accurately describe the scope of ICC's review and verification, and requires ICC's written approval before publication.

Sincerely,

Kevin McOsker
Vice President, Technical Resources
