Code/Standard: IBC 2024

Applies to following Printings: 1st Printing, 2nd Printing

Section/Table/Figure Number: Section 904.14.1

Posted: August 2, 2024 updated October 31, 2025

Correction:

[F] 904.14.1 Manual system operation. A manual actuation device shall be located at or near a *means of egress* from the cooking area not less than 10 feet (3048 mm) and not more than 20 feet (6096 mm) from the kitchen exhaust system. The manual actuation device shall be installed not more than 48 inches (1200 mm) nor less than 42 inches (1067 mm) above the floor and shall clearly identify the hazard protected. The manual actuation shall require a maximum force of 40 pounds (178 N) and a maximum movement of 14 inches (356 mm) to actuate the fire suppression system.

Exceptions:

1. *Automatic sprinkler systems* shall not be required to be equipped with manual actuation means.
2. Where locating the manual actuation device between 10 feet (3048 mm) and 20 feet (6096 mm) from the cooking area is not feasible, the *fire code official* is permitted to accept a location at or near a *means of egress* from the cooking area, where the manual actuation device is unobstructed and in view from the *means of egress*.
3. Mobile food preparation vehicles in accordance with *International Fire Code* Section 4106.

Correlation Notes: F18-21 added Exception 3

1607.14.3

Errata	IBC Chapter 16 STRUCTURAL DESIGN
---------------	---

Code/Standard: IBC 2024

Applies to following Printings: 1st

Section/Table/Figure Number: 1607.14.3

Posted: August 2, 2024

Correction:

~~1607.14.3~~ **1607.22 Photovoltaic panel systems.** Roof structures that provide support for *photovoltaic panel systems* shall be designed in accordance with Sections ~~1607.14.3.4~~ **1607.22.1** through ~~1607.14.3.5~~ **1607.22.5**, as applicable.

~~1607.14.3.4~~ **1607.22.1 Roof live load.** Roof structures that support *photovoltaic panel systems* shall be designed to resist each of the following conditions:

1. Applicable uniform and concentrated roof *loads* with the *photovoltaic panel system dead loads*.

Exception: *Roof live loads* need not be applied to the area covered by *photovoltaic panels* where the clear space between the panels and the roof surface is 24 inches (610 mm) or less.

2. Applicable uniform and concentrated roof loads without the *photovoltaic panel system* present.

~~1607.14.3.2~~ **1607.22.2 Photovoltaic panels or modules.** The *structure* of a roof that supports solar *photovoltaic panels* or modules shall be designed to accommodate the full solar *photovoltaic panels* or modules and ballast *dead load*, including concentrated *loads* from support frames in combination with the *loads* from Section ~~1607.14.3.4~~ **1607.22.1** and other applicable *loads*. Where applicable, snow drift *loads* created by the *photovoltaic panels* or modules shall be included.

~~1607.14.3.3~~ **1607.22.3 Elevated photovoltaic (PV) support structures with open grid framing.** Elevated photovoltaic (PV) support structures with open grid framing and without a *roof deck* or sheathing shall be designed to support the uniform and concentrated *roof live loads* specified in Section ~~1607.14.3.4~~ **1607.22.1**, except that the uniform *roof live load* shall be permitted to be reduced to 12 psf (0.57 kN/m²).

~~1607.14.3.4~~ **1607.22.4 Ground-mounted photovoltaic (PV) panel systems.** Ground-mounted photovoltaic (PV) panel systems are not required to accommodate a *roof live load*. Other *loads* and combinations in accordance with Section 1605 shall be accommodated.

~~1607.14.3.5~~ **1607.22.5 Ballasted photovoltaic panel systems.** Roof structures that provide support for ballasted *photovoltaic panel systems* shall be designed, or analyzed, in accordance with Section 1604.4; checked in accordance with Section 1604.3.6 for deflections; and checked in accordance with Section 1611 for ponding.

Correlation Notes: Revises section numbering with to align with approved as submitted (AS) code change proposal S92-22. Errata removes photovoltaic panel systems as a subsection of 1607.14 (Reduction in uniform roof live load) and moves to a stand-alone subsection 1607.22 as intended by S92-22. The intent of proposal S92-22 is to improve the coordination the between IBC and ASCE 7. (Section 3111.1.2 will require errata to point to new section 1607.22)

1609.3

Errata	IBC Chapter 16 STRUCTURAL DESIGN

Code/Standard: IBC 2024

Applies to following Printings: 1st

Section/Table/Figure Number: 1609.3

Posted: November 1, 2023

Correction:

1609.3 Basic ~~design~~ wind speed. The basic *wind speed*, V , in mph, for the determination of the wind loads shall be determined by Figures 1609.3(1) through 1609.3(4).

The basic *wind speed*, V , for use in the design of *Risk Category* I buildings and structures shall be obtained from Figure 1609.3(1).

The basic *wind speed*, V , for use in the design of *Risk Category* II buildings and structures shall be obtained from Figure 1609.3(2).

The basic *wind speed*, V , for use in the design of *Risk Category* III buildings and structures shall be obtained from Figure 1609.3(3).

The basic *wind speed*, V , for use in the design of *Risk Category* IV buildings and structures shall be obtained from Figure 1609.3(4).

Basic wind speeds for Hawaii, US Virgin Islands, and Puerto Rico shall be determined by using the ASCE Wind Design Geodatabase. The ASCE Wind Design Geodatabase is available at <https://asce7hazardtool.online>, or an approved equivalent.

The basic *wind speed*, V , for the special wind regions indicated near mountainous terrain and near gorges shall be in accordance with local jurisdiction requirements. The basic wind speeds, V , determined by the local jurisdiction shall be in accordance with Chapter 26 of ASCE 7.

In nonhurricane-prone regions, when the basic *wind speed*, V , is estimated from regional climatic data, the basic *wind speed*, V , shall be determined in accordance with Chapter 26 of ASCE 7.

Correlation Notes: Code change S9-22 AM.

3114.8.5.3 Allowable shear. The allowable shear for the *profiled steel panel*-side walls (longitudinal) and end walls (transverse) for wind design and seismic design using the coefficients of Section 3114.8.5.2 shall be in accordance with Table 3114.8.5.3, provided that all of the following conditions are met:

1. The total linear length of all openings in any individual side wall or end wall shall be limited to not more than 50 percent of the length of that side wall or end wall, as shown in Figure 3114.8.5.3(1).
2. Any full-height wall length, or portion thereof, less than 4 feet (~~3051~~1219 mm) shall not be considered as a portion of the lateral force-resisting system, as shown in Figure 3114.8.5.3(2).
3. All side walls or end walls used as part of the lateral force-resisting system shall have an existing or new boundary element on all sides to form a continuous load path, or paths, with adequate strength and stiffness to transfer all forces from the point of application to the final point of resistance, as shown in Figure 3114.8.5.3(3). The existing door interlocking mechanism shall not be considered as a component of the required load path.
4. Where openings are made in *intermodal shipping-container* walls, floors or roofs, for doors, windows and other openings:
 - 4.1 The openings shall be framed with steel elements that are designed in accordance with Chapters 16 and 22.
 - 4.2 The cross section and material grade of any new steel element shall be equal to or greater than the steel element removed.
5. A maximum of one penetration not greater than 6 inches (152 mm) in diameter for conduits, pipes, tubes or vents, or not greater than 16 square inches (10 323 mm²) for electrical boxes, is permitted for each individual 8-foot (2438 mm) length of lateral force-resisting wall. Penetrations located in walls that are not part of the lateral force-resisting system shall not be limited in size or quantity. Existing intermodal shipping container vents shall not be considered a penetration, as shown in Figure 3114.8.5.3(4).
6. End wall doors designated as part of the lateral force-resisting system shall be intermittently welded closed around the full perimeter of the door panels.

Code/Standard: IBC 2024

Applies to following Printings: 1st

Section/Table/Figure Number: ASTM

Posted: August 2, 2024 Updated August 29, 2025

Correction:

B209—21a Standard Specification for Aluminum and Aluminum-Alloy ~~Steel~~ Sheet and Plate
C744—~~2016~~2021 Specification for Prefaced Concrete and Calcium Silicate Masonry Units

C631—~~09~~(2020)

Standard Specification for Bonding Compounds for Interior Gypsum Plastering

D6223/D6223M—~~2016~~ 2021 Specification for Atactic Polypropylene (APP) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements

Correlation Notes: ADM52-22

NFPA 701—23 Standard Methods of Fire ~~Test~~ Tests for Flame Propagation of Textiles and Films

Correlation Notes:

J103.2

Errata	IBC Appendix J GRADING
---------------	-------------------------------

Code/Standard: IBC 2024

Applies to following Printings: 1st

Section/Table/Figure Number: J103.2

Posted: June 21, 2024

Correction:

J103.2 Exemptions. A grading *permit* shall not be required for the following:

1. Grading in an isolated, self-contained area, provided that the public is not endangered and that such grading will not adversely affect ~~adjoining~~ adjacent properties.
2. Excavation for construction of a structure permitted under this code.
3. Cemetery graves.
4. Refuse disposal sites controlled by other regulations.
5. Excavations for wells, or trenches for utilities.
6. Mining, quarrying, excavating, processing or stockpiling rock, sand, gravel, aggregate or clay controlled by other regulations, provided that such operations do not affect the lateral support of, or significantly increase stresses in, soil on ~~adjoining~~ adjacent properties.
7. Exploratory excavations performed under the direction of a registered design professional.

Exemption from the *permit* requirements of this appendix shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or ordinances of this jurisdiction.

Correlation Notes: Adds Code Change G15-22 (AS)

J104.2

Errata	IBC Appendix J GRADING
---------------	-------------------------------

Code/Standard: IBC 2024

Applies to following Printings: 1st

Section/Table/Figure Number: J104.2

Posted: June 21, 2024

Correction:

J104.2 Site plan requirements. In addition to the provisions of Section 107, a grading plan shall show the existing grade and finished grade in contour intervals of sufficient clarity to indicate the nature and extent of the work and show in detail that it complies with the requirements of this code. The plans shall show the existing grade on ~~adjoining~~ adjacent properties in sufficient detail to identify how grade changes will conform to the requirements of this code.

Correlation Notes: Adds Code Change G15-22 (AS)
