

## WORK GROUPS

Created: 03/04/21

Work Groups play a pivotal role in ICC committees. They are typically assigned areas of study by the main committee (Consensus Committee on Log Structures – IS-LOG) and are charged with investigation, reporting and developing work product for the LOG. The LOG is the final authority in making decisions on LOG deliverables (see below).

Work Groups operate as follows:

- Chaired by a LOG committee member
- Prefer 2 – 3 additional LOG committee members
- Meet via conference calls
- Any interested party can participate
- Operate informally with the goal of reaching consensus (not necessarily unanimity)
- Conference calls do not have quorum requirements. Those on the call can reach consensus
- WG members are encouraged to participate in as many WG conference calls as possible in order to avoid re-consideration of issues which have previously achieved consensus

The LOG effort is governed by a committee approved Scope.

### COMMITTEE APPROVED LOG WORK GROUPS

Structural - This work group will focus on subjects related load bearing & transfer, notches and log walls with respect to being plumb.

WG Chair (LOG committee member): Robert Chambers

Thermal/Infiltration - This work group will focus subjects related to the thermal envelope.

WG Chair (LOG committee member): Rob Pickett
